

Director of IT, Infrastructure Operations at Business Wire

Dear Hiring Manager,

I am excited to apply for the Director of IT, Infrastructure Operations position at Business Wire. As someone who has always been fascinated by the power of information distribution and the critical role technology plays in it, the opportunity to contribute to an established leader like Business Wire is truly compelling. Your commitment to secure, high-quality services and the strategic focus on advanced technology solutions like AWS and SaaS platforms resonate deeply with my own professional values and experiences.

During my tenure as Director of IT & Development at Verus Investments, I directed technology strategy and managed large budgets, all while leading critical cyber security initiatives. One particular achievement I'm proud of is championing a data warehousing project that reduced reporting time by 40%. This experience aligns perfectly with the strategic IT management and cloud native services required at Business Wire. Additionally, my time at REI as a Senior Web Developer allowed me to implement DevOps practices that improved deployment speed by 16% and reduced downtime by 8%. These accomplishments underscore my ability to enhance system performance and reliability, key traits necessary for overseeing a global network.

What excites me most about this role is the potential to leverage my background in cloud management and SRE strategy to support Business Wire's mission of delivering reliable and secure information. I thrive in fast-paced, global environments and have a proven track record of leading teams through complex technological challenges. My experience with CI/CD automation will also be a valuable asset in driving Business Wire's advanced technology solutions forward.

Thank you for considering my application. I am enthusiastic about the opportunity to bring my expertise in IT infrastructure and passion for innovative technology solutions to Business Wire. I look forward to the possibility of contributing to your team.

Best regards,

Joe Wilson
